CULTURAL SUGGESTIONS FOR GREENHOUSE GROWING

Plant Anemones any time from September until February. Place tubers close in a flat of clean sand, cover 1 inch and keep moist. Place in cool house for a week and tubers will be sprouted and ready to plant in pots or bench 4 in. apart each way. Use virgin sandy loam about 5 in. deep, containing about 10 percent well-rotted manure. Success depends on cool growing conditions, night temperature should not go above 45 degrees; 38 degrees at night will produce larger flowers. Water sparingly until plants are growing well then give plenty of water and occasional feeding. Maximum light and ventilation should be provided at all times. Perfect drainage is essential.

F R E E S I A S GREENHOUSE GROWN BULBS

We wish to call your attention to our list of greenhouse grown Freesia bulbs. All of these varieties are greenhouse grown, in sterilized soil. While such bulbs are more costly to produce we cannot recommend their use too highly when the result is compared with that of field grown bulbs. Another advantage to be gained from greenhouse grown stock is their response to early forcing which makes a Freesia crop certain for the Christmas holidays.

California-grown Freesia bulbs proved so unsatisfactory the past few years that we have discontinued all except greenhouse-grown stock which our customers have found far superior in every respect.

APPLE BLOSSOM. (U. S. Plant Patent No. 486.) Soft apple-blossom-pink. Giant size with exceptional lasting qualities.

GIANT FLOWERING DARWIN TULIPS

The Holland bulb growers, in spite of tremendous difficulties, managed to increase their stocks of Novelty Tulips. This year we have revised our list to include the introductions displayed at the shows in Holland. Several of these varieties received THE AWARD OF MERIT of the DUTCH BULB GROWERS ASSOCIATION. We can recommend them without reservation.

The Darwin Tulip is of the later-flowering class. For beds and borders we recommend the following varieties for their stately bearing and rich colors. These Tulips grow from 24 to 34 inches high, the flowers are borne on strong stems and are of the finest shades known among flowers.

Great care has been exercised to select only the best varieties in each color class. However, we are in a position, through our growers in Holland, to supply any variety requested if ordered before August 15th. Varieties prefaced by an F and O are equally suitable for indoor or outdoor culture; varieties prefaced by an O are for outdoor culture only. These varieties are of exceptional merit and bear highest recommendation.

The Lilies we offer are all perfectly hardy and will produce a quantity of beautiful flowers of various colors, which effect cannot be duplicated by any other flower. Lilies are very adaptable for herbaceous borders or for planting among shrubbery. Kennedy Kwaliti Pot-Grown Strawberry Plants

There are many reasons for starting your Strawberry bed with pot-grown plants. They are established growing plants and their growth is not interrupted or retarded by transplanting, thus there is no loss of plants. They can be cultivated as soon as set out and kept growing. In planting pot-grown plants, a full crop is assured for next summer. Plant in rows two feet apart, twelve inches apart in the row.

August has long been considered the best month in which to start a Strawberry bed, although the planting may be done throughout the month of September with good success.

Strawberries can be grown in almost any soil or climate, from Florida to Canada, that will grow other crops; they are not fussy about types of soil, but like all other crops they will do better in well drained soil which will retain moisture and of good fertility. In planting be sure to firm the soil well around the plants and do not cultivate or hoe too deeply as too deep cultivation cuts the roots and loosens the soil improperly for root growth. Moisture is an essential requirement after the fruit is formed and during fruiting time.

In preparing the bed, when barnyard manure is not easily obtained, a complete fertilizer should be worked well into the soil at the rate of fifteen pounds per one thousand square feet of bed. Do not allow the plants to come in contact with the fertilizer, as it is likely to kill or scorch them. Another application of fertilizer, at the same rate as used in preparing the bed, should be applied again along the rows of plants very early in the spring before growth starts. All fertilizer should be carefully brushed off the leaves immediately after applying and never use fertilizer when the plants are wet. Unless soil is very acid, lime should not be used.

After heavy frost, usually in December in the vicinity of New York, apply a light mulch of salt hay or other similar material to prevent alternate freezing and thawing. When growth starts in spring, the salt hay should be arranged between the rows. This keeps the fruit clean, prevents the growth of weeds, and retains moisture which is very necessary during the fruiting season.

Kennedy Kwality Lawn Grass Seeds

FOR PERMANENT LAWNS OF PUTTING GREEN TEXTURE — HOW TO MAKE A LAWN

The ground should be thoroughly prepared; that is, the soil should be fertilized, then turned over to a depth of 6 inches and pulverized. Sow good seed (which is very essential) roll the ground and cross roll in order to press the seed firmly into the soil. The proper time to sow grass seed depends upon the latitude. In the central and eastern states seed may be sown from March 1st to the end of June. Seed may be sown in the fall, from the first part of August to the end of October. Sow, if possible, when the ground is moist. For seeding a new lawn use 150 pounds to the acre.

KENNEDY'S BENTURF

Reg. U.S. Pat. Off.

LAWN GRASS SEED MIXTURE (Bent Formula)

The popularity of golf in recent years has made comparison of lawns and putting greens an easy matter. One hardly expects his lawn to look as perfect as a putting green, but this is possible if sown with Kennedy's Benturf Lawn Grass Seed Mixture. With reasonable preparation and care excellent results have been accomplished with our Kennedy's Benturf Lawn Grass Seed Mixture which

contains a large amount of Bent seed. This makes a compact, rapid growth, forming a close sward withstanding wear and tear. **Lb., \$2.15; 25 lbs., \$50.00; 100 lbs., \$195.00.**

KENNEDY'S GREENTURF LAWN GRASS SEED MIXTURE

For over forty-five years Kennedy's Greenturf Lawn Grass Seed Mixture has been used to seed many of the most beautiful lawns in America. The seed in this mixture is all recleaned and especially adapted to withstand the heat and drought of the summer. When properly sown and cared for Greenturf will produce a beautiful green lawn the entire season. **Lb., \$1.95; 25 lbs., \$45.00; 100 lbs., \$175.00.**

KENNEDY'S KARPETURF LAWN GRASS SEED MIXTURE

This mixture is comprised of some of the quick germinating grasses as well as larger proportions of the permanent, deep rooted varieties. It has been tried in a great many sections of the country and has given excellent results where a quick cover was desired and has proven particularly adaptable for sowing on old lawns which have become shoddy and in need of renovating. **Lb., \$1.75; 25 lbs., \$38.75; 100 lbs., \$150.00.**

KENNEDY'S RENOVATING LAWN GRASS SEED MIXTURE

This mixture has been tried in a great many sections of the U. S. for the past few years. It contains grasses which grow especially well in light or sandy soil. Recommended for renovating lawns which have become bare in spots. **Lb., \$1.25; 25 lbs., \$30.00; 100 lbs., \$110.00.**

KENNEDY'S TENNIS COURT LAWN GRASS SEED MIXTURE

The hardiest and finest low-growing grasses are contained in this mixture. It produces a beautiful and lasting green turf calculated to withstand hard wear and tear. **25 lbs., \$48.75; 100 lbs., \$190.00.**

KENNEDY'S PUTTING GREEN LAWN GRASS SEED MIXTURE

This mixture is made up of deep rooting permanent grasses with a view of forming a close turf which will stand being played on a great deal without showing any wear and tear. **25 lbs., \$48.75; 100 lbs., \$190.00.**

KENNEDY'S KWIKTURF LAWN GRASS SEED MIXTURE

Where a quick turf is desired which will remain green with a minimum of care and attention we recommend this mixture which is composed of deep rooting, strong growing grasses. **Lb., \$1.40; 25 lbs., \$31.25; 100 lbs., \$120.00.**

KENNEDY'S SHADETURF LAWN GRASS SEED MIXTURE

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward. **Lb., \$2.10; 25 lbs., \$47.50; 100 lbs., \$185.00.**

KENNEDY'S TERRACE LAWN GRASS SEED MIXTURE

A mixture of strong, deep-rooted grasses for banks and terraces. Although the grasses are strong and deep-rooted, they will produce a fine, green velvety surface, and also prevent washing away during heavy rains. **Lb., \$1.90; 25 lbs., \$42.50; 100 lbs., \$165.00.**

LAWN CLOVER—Dwarf White

Very dwarf and of a spreading habit. We advise sowing White Clover separately on account of the seed being much heavier than that of the finer grass seed. It has a tendency to work to the bottom of the receptacle it is being sown from and consequently the last part of the grass seed sown has a greater percentage of Clover than the first. **Lb., \$2.25.**

WILD WHITE CLOVER

Dwarf growing, thick White Clover which is more vigorous than the ordinary White Clover, and excellent for lawns. One pound will cover about 800 square feet. **Lb., \$2.85.**

KENNEDY'S PASTURE MIXTURE For Permanent Pasture and Hay Crops

Our Permanent Pasture Grass Seed Mixtures contain only grasses most suitable for this purpose. The result of sowing Kennedy's Permanent Pasture Mixture is a successive growth of rich, succulent grasses from early spring until late fall.

We recommend, in good soil, sowing 80 lbs. per acre or in poor soil 100 lbs. per acre. We also suggest sowing an additional 10 lbs. of Red Clover, in either case, to the acre.

Permanent Pasture Grass Seed may be sown either spring or fall but we advise sowing Clover in the spring only.

When ordering state whether your soil is sand, clay, moist or dry so that the proper proportions of the various grasses may be used.

A—For Light Soil. Sow 100 lbs. per acre. 100 lbs., \$85.00.

B—For Wet, Heavy Soil. Sow 100 lbs. per acre. 100 lbs., \$95.00.
